

**PANEL REF. 38.10441.00**

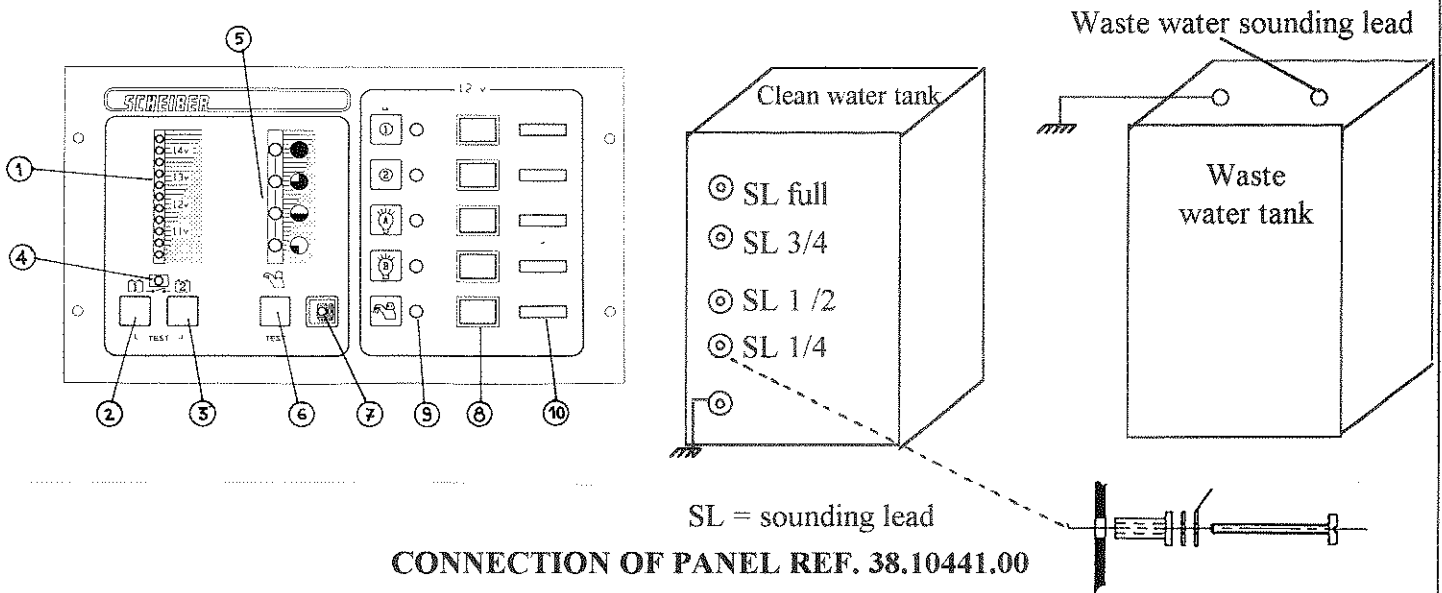

**DESCRIPTIVE**

This unit regroups measuring and controlling functions . A voltmeter ① "Bargraph" model shows on 11 leds (luminous indicators) the voltage of main-or auxiliary battery, by pushing one of the two push-buttons ② or ③. A luminous diode ④ shows if both batteries are coupled or not..

Four luminous diodes ⑤ show by pushing button ⑥, clean water level, thanks to the sounding-leads settled on the tank. A led ⑦ informs the user that waste water tank is full (it is not necessary to push button ⑥, this indicator is a visual alarm).

Five circuits 12V are put into service by operating the interrupters ⑧. A luminous diode ⑨ shows if the circuit is operating. A fuse ⑩ protects each 12V departure. When changing them, they have to be replaced by a fuse of the same model.

**CONNECTION OF THE SOUNDING-LEADS ON THE TANK**

**CONNECTION OF PANEL REF. 38.10441.00**
